

Telecom Customer Attrition Analysis

Business Intelligence Project Report

Internship Unit: Data Analysis

Internship Date Range: April - May 2025

Analyst: Ravish Kumar

Contact Information: ravishkumar1242@email.com | +91 6200995377

Abstract

This report summarizes my internship experience at DataTech Solutions, where I conducted a comprehensive analysis of customer attrition in the telecommunications sector. The project aimed to identify key drivers of customer churn and develop predictive models to mitigate attrition risks. Using tools like Power BI and Python, I analyzed a telecom customer dataset, performed exploratory data analysis, and built machine learning models to predict churn. Key findings revealed significant correlations between attrition and factors such as contract duration, payment methods, and service type. The insights gained from this project provided actionable recommendations for improving customer retention strategies. This internship enhanced my technical skills in data analysis, visualization, and machine learning, while also deepening my understanding of business analytics in the telecom industry.

Introduction

DataTech Solutions is a leading analytics firm specializing in data-driven decision-making for businesses across various industries. During my internship, I worked on a Business Intelligence project focused on analyzing customer attrition in the telecom sector. The telecom industry faces high churn rates, with annual attrition ranging between 15-25%, making it a critical area for analysis. I chose this internship to gain hands-on experience in business analytics and to apply my technical skills in a real-world setting. The project aligned with my career goals of becoming a data analyst and provided an opportunity to work with advanced tools and techniques.

Description of Internship Content

Projects and Tasks

- Data Preparation and Cleaning:**
 - Imported and cleaned the telecom customer dataset.
 - Addressed missing values and ensured data consistency.
- Exploratory Data Analysis (EDA):**

- Analyzed relationships between variables such as contract duration, payment methods, and service type.
- Identified demographic patterns and their impact on attrition.
- 3. **Data Visualization:**
 - Created interactive dashboards using Power BI to visualize key insights.
 - Highlighted trends such as high attrition rates among month-to-month contract customers.
- 4. **Predictive Modeling:**
 - Developed machine learning classification models using Python and Scikit-learn.
 - Evaluated model performance to predict customer churn risk.

Goals and Importance

The primary goal of the project was to identify factors driving customer attrition and provide actionable recommendations to reduce churn. This analysis is crucial for telecom companies to retain customers, improve revenue stability, and enhance customer satisfaction.

Internship Experience

Challenges and Solutions

1. **Challenge:** Handling missing and inconsistent data.
Solution: Used Python libraries like Pandas to clean and preprocess the dataset effectively.
2. **Challenge:** Developing accurate predictive models.
Solution: Experimented with different algorithms and hyperparameters to optimize model performance.

Impact on Career Development

This internship significantly enhanced my technical skills in data analysis, visualization, and machine learning. It also improved my problem-solving abilities and understanding of business analytics. Working in a professional environment taught me the importance of collaboration and effective communication in delivering data-driven insights.

Evaluation of Internship Unit

DataTech Solutions provided a supportive and dynamic work environment. The management encouraged innovation and provided valuable feedback throughout the project. The company's focus on data-driven decision-making aligned perfectly with my career aspirations.

Summary and Reflection

Key Results and Learnings

- Identified key drivers of customer attrition, including contract duration, payment methods, and service type.
- Developed predictive models to identify at-risk customers.
- Gained proficiency in tools like Power BI, Python, and Scikit-learn.

Future Career Development Plans

This internship reinforced my passion for data analytics and provided a strong foundation for my career. I plan to continue developing my skills in machine learning and business intelligence while seeking opportunities to work on impactful projects in the tech industry.
